EXITRAZ EC **CATTLE AND PIG SPRAY**

Active Constituent: 125 g/L Amitraz Also contains: 600 g/L Hydrocarbon liquid (solvent)

For the control of: Organophosphate and Synthetic Pyrethroid resistant Cattle Tick, Paralysis Tick and Bush Tick on Beef and Dairy Cattle, and Cattle Tick on Sheep, Goats, Deer and Certain Circus Animals in NSW only, and Mange on Pigs.

148mm

ZERO (0) DAYS WITHHOLDING PERIODS FOR MEAT AND MILK

DIRECTIONS FOR USE

Contraindications

This product should not be used on horses, other equines, felines or Chihuahua dogs.

Treat animals in accordance with good agricultural practice. Animals should not be treated in extremely hot weather (>40°C) or if under heat stress. Ensure adequate shade is available post-treatment.

Dosage and Administration

LIVESTOCK	PEST	STATE	RATE	CRITICAL	COMMENTS
Cattle	Cattle Tick [Rhipicephalus (Boophilus) microplus]	NSW, QLD, WA and NT only	400 mL per 200 L water	Treat at intervals of 19-21 days	Controls organophosphate and synthetic pyrethroid resistant strains of the Cattle Tick. Refer also to General Directions
	Paralysis Tick (Ixodes holocyclus)			Treat at intervals of 7-10 days	
	Bush Tick (NZ Cattle Tick) (Haemaphysalis longicornis)	NSW, QLD, WA, NT and VIC		Treat at intervals of 7-21 days	
Sheep, goats, deer and certain circus animals	Cattle Tick [Rhipicephalus (Boophilus) microplus]	NSW only	400 mL per 200 L water	holdings at 14 Treat animals be	s on quarantined to 21 day intervals. eing moved at 3 to 7 intervals.
Pigs	Mange (Sarcoptes scabiei var. suis)	All States	40 mL per 10 L water	pens, cover drinl out pen. Spray 2 L spray wash, e and legs, und covered by scab bedding with cle treatment a	and bedding from king bowls and clean pigs with minimum especially inside ears er jowls and areas s. Replace discarded ean material. Repeat after 7-10 days. General Directions.

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

General Directions

Hand Spraying: Ensure all parts of the animal are thoroughly wet, especially belly, inside legs and ears (most important for pigs). Animals should be restrained in a crush for spraying. A pump capable of delivering a coarse spray should be used. Knapsack sprays are NOT recommended.

A fresh spray wash should be made up for each day's treatment. Clean out the spray reservoir at the end of each day and discard any remaining wash. Two treatments at 7-10 day intervals are recommended for sows and gilts before entering farrowing pens, for piglets at weaning and for pigs newly brought inside the piggery. Boars should be treated every 3 months.

Spray Races:

	UNSTABILISED STABILISED			
ACTION	Stabilisation is not required when all spray wash is used within 24 hours.	Stabilisation is required when unused wash is retained for later use.		
Initial Charging	Charging 400 mL per 200 L water			
Mixing	Pour required amount of EXITRAZ EC into a bucket with approximately 10 L of water and stir thoroughly. Pour contents of bucket into reservoir or sump. Rinse bucket and add rinsings. Fill reservoir with total volume of water required.			
Stirring	Spraywash in sump must be stirred thoroughly at commencement of each spraying session and again if there is a break for more than half an hour during spraying.			
Reinforcing	Each time the level of spraywash in the sump drops by 200 L add 250 mL EXITRAZ EC, without adding water, and continue spraying. If level of wash is allowed to fall excessively without reinforcement, concentration of EXITRAZ EC will fall and efficiency will be reduced. Repeat reinforcement until no more wash can be pumped out. If continuing spraying, make up more wash at the initial charge rate and complete spraying. When wash is polluted clean out sump before recharging.			
Stabilising	Important: Because the wash is not stabilised, any remaining wash must be discarded and a new batch made up for the next spraying session. Alternatively, wash may be stabilised as opposite.	If, after spraying, unused wash is retained in the sump, add hydrated lime (EXITRAZ Stabiliser). Mix lime to a smooth paste with water and strain into wash at the rate of 2 kg per 200 L of spraywash and stir vigorously. Further additions of hydrated lime at the rate of 1 kg per 200 L wash must be made at intervals of 2 months when regular spraying is not in progress. Stir or agitate at regular intervals.		
Sampling	Sampling NOT required.	Stir the sump vigorously before taking a sample from a nozzle on the race. Analysis of dip samples is available through the Biosecurity Queensland, Chemical Residue Laboratory, Health and Food Sciences Precinct, 39 Kessels Road, Coopers Plains, QLD 4108. Suitable sample bottles are obtainable from your local agent.		

WITHHOLDING PERIODS MEAT: Zero (0) days

MILK: Zero (0) days

TRADE ADVICE - EXPORT SLAUGHTER INTERVAL (ESI) Cattle, Sheep: Zero (0) days. Before using this product, confirm the current ESI from The Hunter River Company on (03) 5821 0922 or the APVMA website (www.apvma.gov.au/residues). Pigs, Goats and Deer: This product does not have an ESI
